North American Boeing 787 Operator Awards APS5000 APU MRO Contract to Revima

Revima, the leading independent Landing Gear & APU MRO, signed a multi-year contract with a large North American Boeing 787 operator for the Maintenance, Repair and Overhaul (MRO) of its APS5000 APU.

The MRO work will be provided by Revima's facility located in Normandy, France, which currently repairs over 600 Auxiliary Power Units and 12,000+ ATA49 Line Replaceable Units annually.

Revima Group continues to be an industry leader in APU MRO Services, having expanded its value offerings for the airline industry with APU Predicare, Effifuel, Opticooling, and Optipower. These new services are powerful examples of how digital innovation can reshape ground operations — transforming limited visibility into actionable insights, reducing APU usage, optimizing APU fuel consumption, and enhancing passenger comfort on the ground.

Olivier Legrand, President & CEO of Revima, commented, "REVIMA is proud to grow our customer base within North America and remains committed to driving smarter, more efficient, and more sustainable aviation across all our group companies."
